

Project Design Phase

Solution Architecture

Date	18 June2026
Name	Mohit Varma
Project Name	Shop EZ
Maximum Marks	4 Marks

Solution Architecture:

The Solution Architecture Diagram of **ShopEZ** illustrates the interaction between all major components of the e-commerce platform. Users access the system through a responsive React.js frontend, which communicates with the Node.js and Express.js backend using RESTful APIs. The backend handles user authentication, product management, shopping cart operations, order processing, and payment integration. Product, user, cart, and order information are stored in the MongoDB database. The processed data is retrieved from the database and delivered back to the frontend, providing users with a seamless online shopping experience.
